

APPLICATION GUIDE

# Underwriting you can inspect

Rytera runs commercial insurance, mortgage, and lending packages through specialist agents — then puts a licensed human on the decision. Full journey. Shadow bind. No black box.

01 — PRODUCT

# What Rytera is

An AI underwriting workbench. It takes a messy submission, runs agents and data oracles, and returns a structured recommendation — decision, findings, pricing indication — for a **licensed underwriter** to accept, override, or refer.

**Shadow by design.** Analysis and UW sign-off stay on in pilot mode. Live bind stays off until your PAS and policy allow it — so you can judge quality without production risk.

**< 15 min**  
target time-to-first UW review

**< 25%**  
override rate goal by day 30

**Fail-closed**  
when required feeds are missing

02 — AUDIENCE

# Who opens it

| Audience                   | What they get                                                          |
|----------------------------|------------------------------------------------------------------------|
| Carrier / MGA underwriters | Faster first pass on commercial packages — with every layer visible    |
| Pilot / product owners     | Shadow-run a redacted book and measure override rate against your book |
| Ops / risk                 | PII redaction, encrypted audits, org-scoped access                     |

03 — PIPELINE

# How a submission moves

Same spine across insurance, mortgage, and lending.

01

07  
HITL

08  
Bind\*

| Stage         | In practice                                                             |
|---------------|-------------------------------------------------------------------------|
| Intake        | Upload, folder drop, email/IMAP, S3, or one-click demos                 |
| Parse         | ACORD, loss runs, SOV, inspections — or mortgage & lending docs         |
| Verify        | Cross-doc reconciliation + oracles (CLUE, A-PLUS, NCCI, CAT when keyed) |
| Score → Price | Multi-agent risk + indicated premium / rate / loan pricing              |
| Decide + HITL | Accept / conditional / refer / decline — then licensed UW sign-off      |

\* Bind is optional and blocked in shadow / pilot until PAS is live.

# What to show

Marketing site for the story. Dashboard for proof. Walk these four screens.

## 01 Overview

“Here’s the pulse — what’s running, what’s waiting on UW.”

Job counts, market cycle, queue, demos. Answer “what’s running?” in under a minute.

## 02 Insurance workspace

“We drop a package — or run a sample — and the job lands with a journey strip.”

Commercial P&C workbench. Samples, custom uploads, then open a row into the full journey.

# 03 Submission journey

“This is the no-black-box screen — every stage and finding is inspectable.”

Stages, COPE, oracles, UW memo, pricing. Built for underwriters and auditors.

# 04 Queue

“UW time goes to the hottest files first — not FIFO.”

Fit / triage scores + journey strips. Prioritized work, not a flat dump.

# Pilot Lab & UW sign-off

**Pilot Lab**

Sandbox readiness (CLUE / A-PLUS / Guidewire / Redis), redacted package runs, PII auto-redact, email ingest, outreach drafts — prep for a 30-day shadow pilot.

**UW Sign-off**

Approve, refer, or decline with notes and override reasons. Pending badges in the nav while you calibrate AI vs UW judgment.

# Decisions you'll see

| Vertical  | Outcomes                                                |
|-----------|---------------------------------------------------------|
| Insurance | ACCEPT · CONDITIONAL_ACCEPT · REFER · DECLINE           |
| Mortgage  | Approve / Refer / Suspend / Deny + rate                 |
| Lending   | Approved / conditions / referred / declined / suspended |

# Built into the product

**ACCESS**

JWT roles · org-scoped jobs

**PII**

Detection + redaction for pilots

**AUDIT**

Encrypted bundles · SHA-256 ZIP exports

**FAIL-CLOSED**

Blocks when required feeds are missing

# Ten-minute demo

1. Open [ryterainc.com/dashboard](#) → sign in
2. **Overview** → run an insurance demo
3. **Insurance** → open the job → walk the **submission journey**
4. **Queue** → show triage order
5. **Pilot Lab** → sandbox readiness + shadow mode
6. Optional: **UW Sign-off** → human override

**Also in the sidebar when you need it:** System Health · Mortgage · Lending · Renewals · Override Analytics · Authority · Market Cycle · Model Registry · Integrations · Webhooks

Carrier / MGA next step → Pilot Partner Brief (30-day shadow ask, data drop, success criteria).
